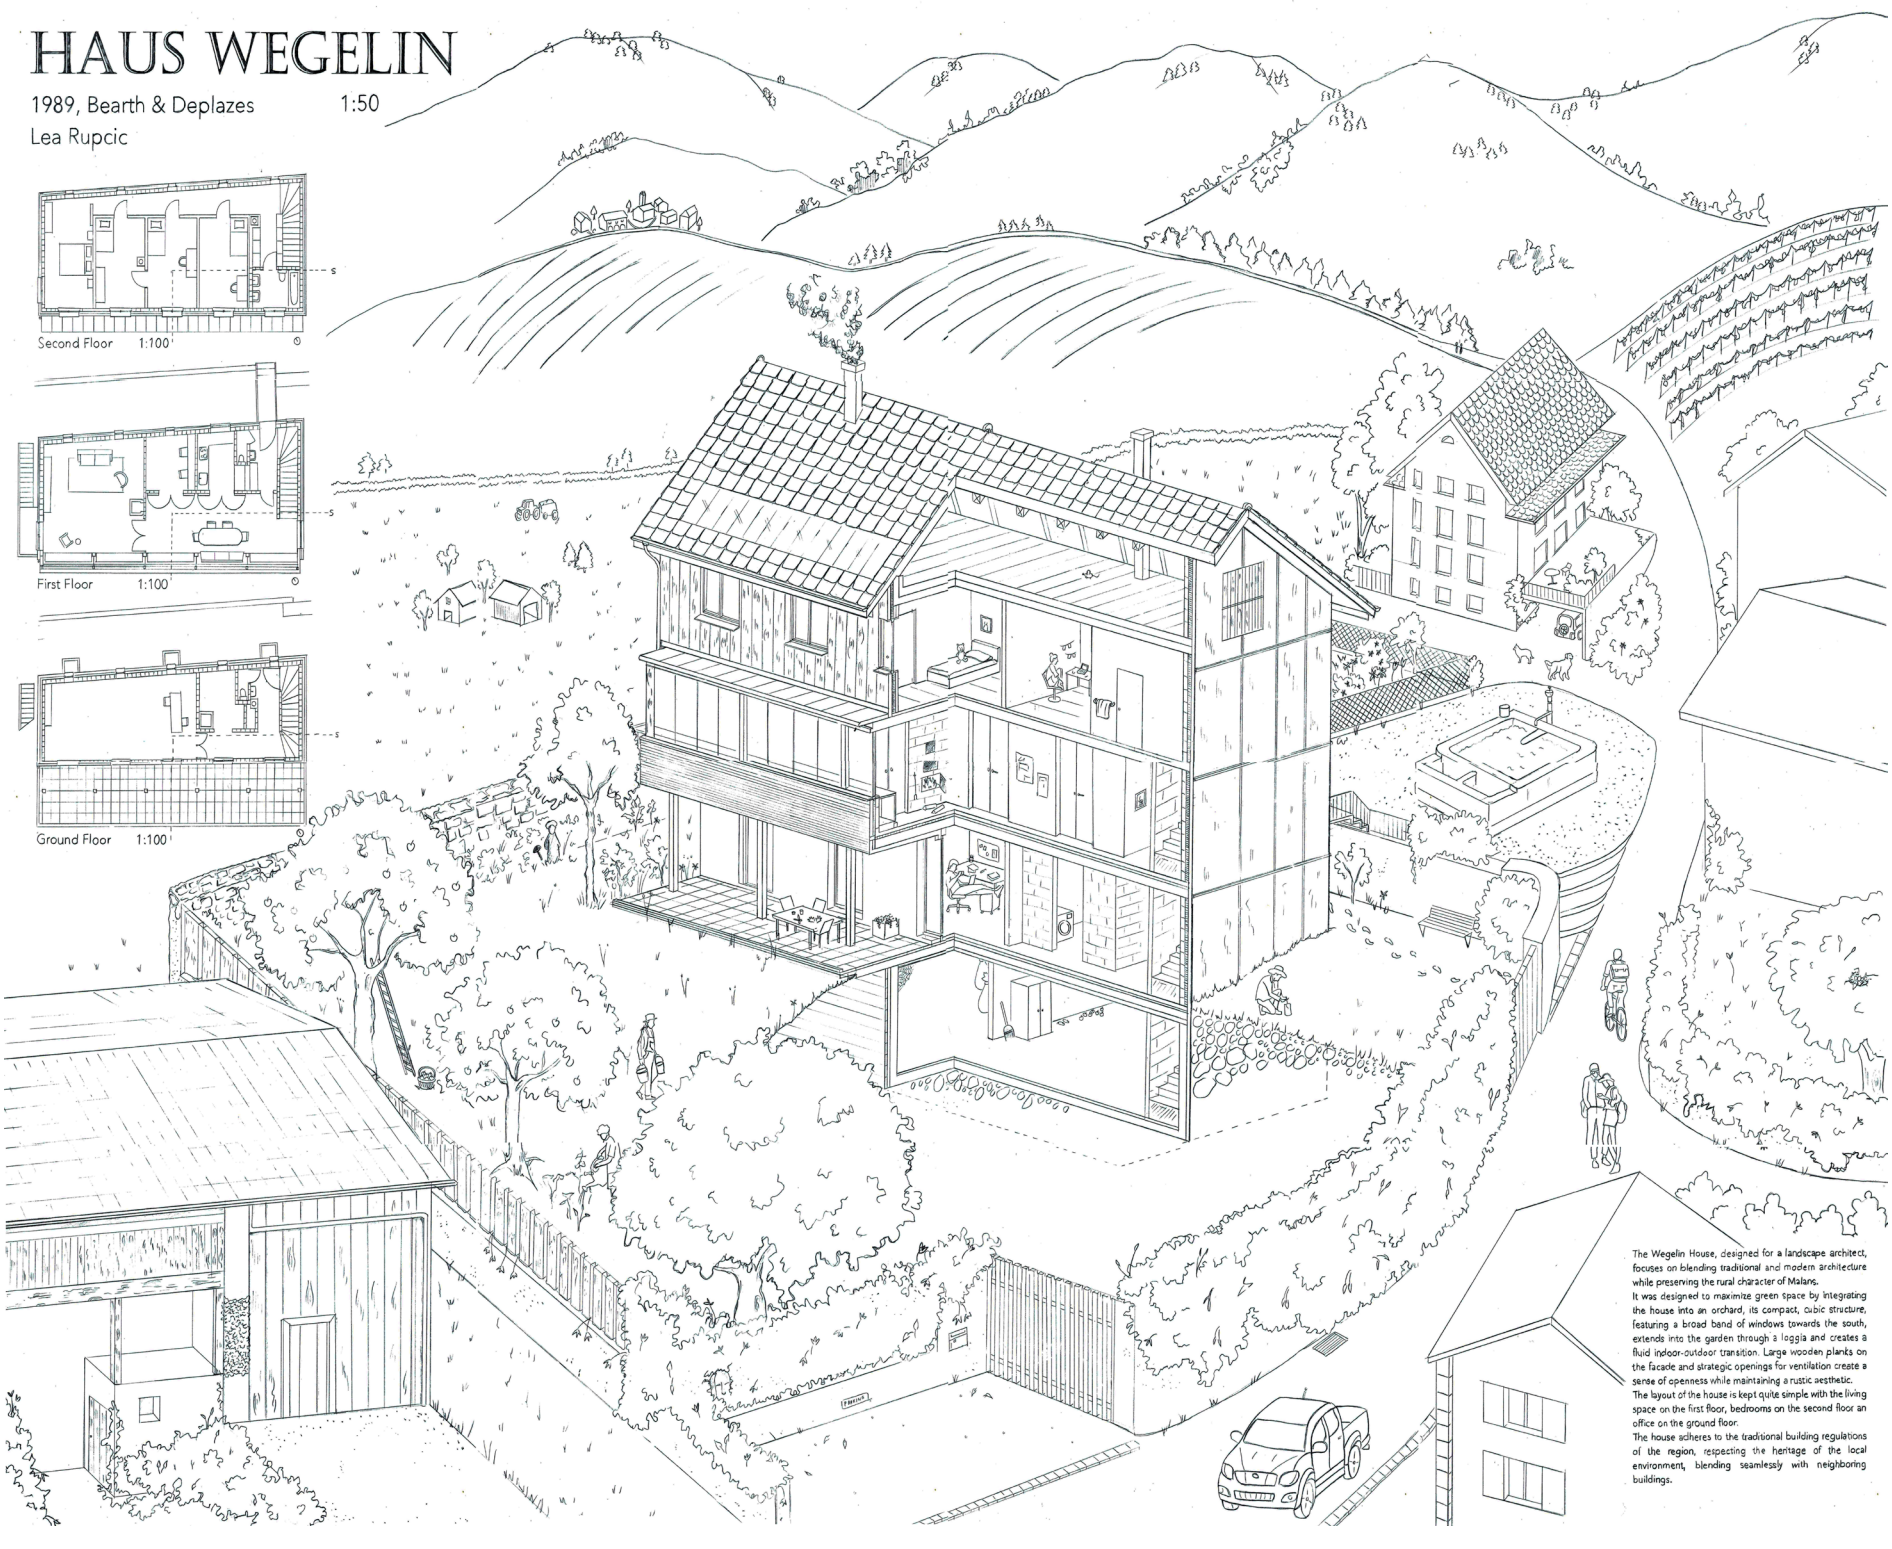
# Chair of Architectural Behaviorology



Drawing by Lea Rupcic of Haus Wegelin, Bearth & Deplazes, 1989

## House Behaviorology in Switzerland

Design Studio HS26

## Mid Review 1 - Poster Session

To find the character and essence of today's house design around Bern, we started with analyzing existing single-family houses in the region. We researched and mapped how these basic units of housing relate to their historical context, to the actors and to their surroundings. What kind of purposes do they fulfill and what kind of activities and behaviors do these houses enable?

By understanding a building, a house not as an isolated object but as a node in a vast and far-reaching network, we grow awareness of the impact of a house on the neighbors, the city, the environment, the society. In finding, analyzing and drawing the networks, which have shaped existing buildings, it will help us to deeply comprehend the qualities and functioning of these houses.
